

Efficient real-time supply management, allocation, distribution and use of business assets

CICOD Inventory Management System (IMS) Application enables efficient real-time supply management, allocation, distribution, tracking and use of business assets/inventory while minimizing losses and leakages. CICOD IMS enables our clients to have complete transparency of their assets or inventory levels by automating the management of their assets/inventory in a hosted system. The application is essential for businesses that need to track and maintain information on inventory, no matter the volume, location or sector including Manufacturing, Retail, Wholesale, Construction, Oil and Gas, Public Sectors and more.

FEATURES

- **Stock Management**
Comprehensive ability to manage stock real-time.
